Problem 1: Finding Complexity using Counter Method

Started on	Wednesday, 13 August 2025, 11:12 AM
State	Finished
Completed on	Wednesday, 13 August 2025, 11:16 AM
Time taken	3 mins 3 secs
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct · Mark 1.00 out of 1.00 Flag question

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;
    int s =1;
    while(s <= n)
    {
        i++;
        s += i;
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Output:
Print the value of the counter variable

For example:

Input	Result
9	12

[Open block draw](#)

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int c=0;
3 void function (int n)
4 {
5     int i= 1;
6     c++;
7     int s =1;
8     c++;
9     while(s <= n)
10    {
11        c++;
12        i++;
13        c++;
14        s += i;
15        c++;
16    }
17 }
18 int main(){
19     int n;
20     scanf("%d",&n);
21     c=0;
22     function(n);
23     printf("%d\n",c+1);
24     return 0;
25 }
```

```
24
25     return 0;
26 }
27
28
29
```

Question 1 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                for(int l=1; l<=n; l++)
                {
                    for(int k=1; k<=n; k++)
                    {
                        printf("*");
                    }
                }
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:
A positive Integer n

Output:
Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int main()
3 {
4     int n;
5     int counter = 0;
6     scanf("%d", &n);
7     if (n == 1) {
8         counter++;
9     }
10    else {
11        counter += (n + 1);
12        counter += 2 * n;
13        counter += 2 * n;
14    }
15    printf("%d\n", counter);
16    return 0;
17 }
```

Question 1 Correct: Mark 1.00 out of 1.00 [Flag question](#)

Problem Statement
Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.
Input Format
First Line Contains Integer m - Size of array
Output Format
First Line Contains Integer m - Number of zeroes present in the given array.

Problem Statement
Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.
Input Format
use index
First Line Contains Integer m - Size of array
Next m lines Contains m numbers - Elements of an array
Output Format
First Line Contains Integer - Number of zeroes present in the given array.

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2 int firstZeroIndex(int arr[], int low, int high) {
3     if (high >= low) {
4         int mid = (low + high) / 2;
5         if ((mid == 0 || arr[mid - 1] == 1) && arr[mid] == 0)
6             return mid;
7         if (arr[mid] == 1)
8             return firstZeroIndex(arr, mid + 1, high);
9         return firstZeroIndex(arr, low, mid - 1);
10    }
11    return -1;
12 }
13 int main() {
14     int m;
15     scanf("%d", &m);
16     int arr[m];
17     for (int i = 0; i < m; i++)
18         scanf("%d", &arr[i]);
19     int index = firstZeroIndex(arr, 0, m - 1);
20     if (index == -1)
21         printf("0\n");
22     else
23         printf("%d\n", m - index);
24     return 0;
25 }
```

CS23331-DAA-2024-CSE / 2-Majority Element

2-Majority Element

Started on Wednesday, 17 September 2025, 11:09 AM

State Finished

Completed on Wednesday, 17 September 2025, 11:28 AM

Time taken 18 mins 52 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 Correct Mark 1.00 out of 1.00 [Flag question](#)

Given an array `nums` of size n , return the majority element.

The majority element is the element that appears more than $\lceil n / 2 \rceil$ times. You may assume that the majority element always exists in the array.

Example 1:

Example 1:
Input: `nums = [3,2,3]`
Output: 3

Example 2:
Input: `nums = [2,2,1,1,3,2,2]`
Output: 2

Constraints:

- $n == \text{nums.length}$
- $1 \leq n \leq 5 * 10^4$
- $-2^{31} \leq \text{nums}[i] \leq 2^{31} - 1$

For example:

Input	Result
3	3
3 2 3	
7	2
2 2 1 1 1 2 2	

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2 int majorityElement(int* nums, int n) {
3     int candidate = nums[0];
4     int count = 1;
5     for (int i = 1; i < n; i++) {
6         if (nums[i] == candidate) {
7             count++;
8         } else {
9             count--;
10        }
11    }
12    return candidate;
13 }
14 int main() {
15     int n;
16     scanf("%d", &n);
17     int nums[n];
18     for (int i = 0; i < n; i++)
19         scanf("%d", &nums[i]);
20     int result = majorityElement(nums, n);
21     printf("%d\n", result);
22     return 0;
23 }
```

CS23331-DAA-2024-CSE / 1-G-Coin Problem

1-G-Coin Problem

Started on	Sunday, 17 August 2025, 7:35 PM
State	Finished
Completed on	Sunday, 17 August 2025, 7:42 PM
Time taken	6 mins 26 secs
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct | Mark 1.00 out of 1.00 | Flag question

Write a program to take value V and we want to make change for V Rs, and we have infinite supply of each of the denominations in Indian currency, i.e., we have infinite supply of { 1, 2, 5, 10, 20, 50, 100, 500, 1000} valued coins/notes, what is the minimum number of coins and/or notes needed to make the change.

Input Format:

Take an integer from stdin.

Output Format:

print the integer which is change of the number.

Example Input :

64

Output:

4

Explanation:

We need a 50 Rs note and a 10 Rs note and two 2 rupee coins.

Answer: (penalty regime: 0 %)

```

1 #include<stdio.h>
2 int main(){
3     int v;
4     scanf("%d",&v);
5     int a[9]={1,2,5,10,20,50,100,500,1000};
6     int s=0,c=0;
7     for(int i=8;i>=0;i--){
8         while(s+a[i]<v){
9             s+=a[i];
10            c++;
11        }
12    }
13    printf("%d",c);
14 }

CS23331-DAA-2024-CSE / 2-G-Cookies Problem

2-G-Cookies Problem

Started on	Tuesday, 19 August 2025, 9:25 PM
State	Finished
Completed on	Tuesday, 19 August 2025, 9:31 PM
Time taken	5 mins 51 secs
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct | Mark 1.00 out of 1.00 | Flag question

Assume you are an awesome parent and want to give your children some cookies. But, you should give each child at most one cookie.

Each child i has a greed factor $g[i]$, which is the minimum size of a cookie that the child will be content with; and each cookie j has a size $s[j]$. If $s[j] \geq g[i]$, we can assign the cookie j to the child i , and the child i will be content. Your goal is to maximize the number of your content children and output the maximum number.

Example 1:

Example 1:**Input:**

```
3
1 2 3
2
1 1
```

Output:

```
1
```

Explanation: You have 3 children and 2 cookies. The greed factors of 3 children are 1, 2, 3.

And even though you have 2 cookies, since their size is both 1, you could only make the child whose greed factor is 1 content.

You need to output 1.

Constraints:

```
1 <= g.length <= 3 * 10^4
0 <= s.length <= 3 * 10^4
1 <= g[i], s[i] <= 2^31 - 1
```

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 #include <stdlib.h>
3 int compare(const void* a, const void* b) {
4     return *(int*)a - *(int*)b;
5 }
6 int findContentChildren(int* g, int gSize, int* s, int sSize) {
7     qsort(g, gSize, sizeof(int), compare);
8     qsort(s, sSize, sizeof(int), compare);
9     int child = 0, cookie = 0;
10    while (child < gSize && cookie < sSize) {
11        if (s[cookie] >= g[child]) {
12            child++;
13        }
14        cookie++;
15    }
16    return child;
17 }
18 int main() {
19     int gSize, sSize;
20     scanf("%d", &gSize);
21     int g[gSize];
22     for (int i = 0; i < gSize; i++) {
23         scanf("%d", &g[i]);
24     }
25     scanf("%d", &sSize);
26     int s[sSize];
27     for (int i = 0; i < sSize; i++) {
28         scanf("%d", &s[i]);
29     }
30     int result = findContentChildren(g, gSize, s, sSize);
31     printf("%d\n", result);

CS23331-DAA-2024-CSE / 3-G-Burger Problem

3-G-Burger Problem

Started on	Wednesday, 3 September 2025, 10:20 AM
State	Finished
Completed on	Wednesday, 3 September 2025, 10:32 AM
Time taken	12 mins 18 secs
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct. Mark 1.00 out of 1.00 Flag question

A person needs to eat burgers. Each burger contains a count of calorie. After eating the burger, the person needs to run a distance to burn out his calories. If he has eaten i burgers with c calories each, then he has to run at least $j^i \times c$ kilometers to burn out the calories. For example, if he ate 3 burgers with the count of calorie in the order: [1, 3, 2], the kilometers he needs to run are $(1^3 \times 1) + (3^3 \times 3) + (2^3 \times 2) = 1 + 9 + 18 = 28$. But this is not the minimum, so need to try out other orders of consumption and choose the minimum value. Determine the minimum distance he needs to run. Note: He can eat burger in any order and use an efficient sorting algorithm. Apply greedy approach to solve the problem.

Output Format

Print: Minimum number of kilometers needed to run to burn out the calories

Sample Input

```
3
5 10 7
```

Sample Output

```
76
```

For example:

Test	Input	Result
Test Case 1	3 1 3 2	18

Question 1 | Correct Mark 10.00 out of 10.00 [Flag question](#)

Playing with Chessboard:

Ram is given with an $n \times n$ chessboard with each cell with a monetary value. Ram stands at the $(0,0)$, that the position of the top left white rook. He is been given a task to reach the bottom right black rook position $(n-1, n-1)$ constrained that he needs to reach the position by traveling the maximum monetary path under the condition that he can only travel one step right or one step down the board. Help ram to achieve it by providing an efficient DP algorithm.

Example:
Input

```
Input
3
1 2 4
2 3 4
8 7 1
Output:
19
```

Explanation:
Totally there will be 6 paths among that the optimal is
Optimal path value: $1+2+8+7+1=19$

Input Format
First Line contains the integer n
The next n lines contain the $n \times n$ chessboard values

Output Format
Print Maximum monetary value of the path

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int max(int a, int b) {
3     return (a > b) ? a : b;
4 }
5 int main() {
6     int n;
7     scanf("%d", &n);
8     int board[n][n];
9     int dp[n][n];

Completed on	Wednesday, 8 October 2025, 10:36 AM
Time taken	5 mins 19 secs
Marks	1.00/1.00
Grade	4.00 out of 4.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Find Duplicate in Array.

Given a read only array of n integers between 1 and n, find one number that repeats.

Input Format:

First Line - Number of elements

```
1
3 10 17 57
6 2 7 10 15 57 246
```

Output Format

The intersection of the arrays in a single line

Example

Input:

1

3 10 17 57

6 2 7 10 15 57 246

Output:

10 57

Input:

1

6 1 2 3 4 5 6

2 1 6

Output:

1 6

For example:

Input	Result
1	10 57
3 10 17 57

Question 1 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Find the intersection of two sorted arrays.

OR in other words,

Given 2 sorted arrays, find all the elements which occur in both the arrays.

Input Format

First Line - Number of elements

n Lines - n Elements

Output Format:

Element x - That is repeated

[Open block editor](#)

For example:

Input	Result
5	1
1 1 2 3 4	

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int findDuplicate(int nums[], int n) {
3     int slow = nums[0];

Question 1 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Find the intersection of two sorted arrays.

OR in other words,

Given 2 sorted arrays, find all the elements which occur in both the arrays.

Input Format

Input Format

The first line contains T, the number of test cases. Following T lines contain:

- Line 1 contains N1, followed by N1 integers of the first array
- Line 2 contains N2, followed by N2 integers of the second array

Output Format

The intersection of the arrays in a single line

Example

Input:

```
1
3 10 17 57
6 2 7 10 15 57 24 6
```

Output:

```
10 57
```

Input:

```
1
6 1 2 3 4 5 6
2 1 6
```

Output:

```
1 6
```

For example:

Input	Result
1	10 57
3 10 17 57	
6	

Answer: (penalty regime: 0 %)

```

Question 1 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Given an array A of sorted integers and another non negative integer k, find if there exists 2 indices i and j such that $A[i] - A[j] = k$, $i \neq j$.

Input Format:

First Line n - Number of elements in an array

Next n Lines - N elements in the array

1 - If pair exists
 0 - If no pair exists

Explanation for the given Sample Testcase:
 YES as $5 - 1 = 4$
 So Return 1.

For example:

Input	Result
3 1 3 5 4	1

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2 int findPairWithDiff(int A[], int n, int k) {
3     int i = 0, j = 1;
4     while (j < n && i < n) {
5         int diff = A[j] - A[i];
